Excel Case Study — Data Cleaning, Pivot Architecture & Visual Analytics

TOTAL TARGET REVENUE	TOTAL REVENUE	TOTAL PROFIT
₹6,300,000	₹6,712,000	₹1,510,060

01. Technical Implementation & Workflow

1. Data Cleaning & Preparation

- **Unstructured Data Handling:** Cleaned, formatted, and standardized raw sales transactional records.
- **Calculated Fields:** Applied baseline Excel formulas for financial calculations:
  - `Total Revenue` = Units Sold × Unit Price
  - `Total Cost` = Calculated base costs
  - `Profit` = Total Revenue − Total Cost

2. Pivot Table Architecture

- **100% Dynamic Engine:** Built clean, lightweight Pivot Tables for real-time aggregations without complex nested formulas.
- **Summary Views:** Structured Month-wise Sales, Product Category Profitability, and Sales Rep Achievement tables.
- **Optimized Performance:** Lightweight calculation engine for smooth slicing & filtering.

02. Dashboard Design & Key Visuals

Interactive Slicers & Filters

Allows management to filter metrics dynamically across multiple dimensions:

Region Slicer (East, North, South, West)

Product Category Slicer | Dynamic Pivot Sync

Visual Chart Breakdown

- **Month-wise Sales:** Column Chart showing monthly trends.
- **Month-wise Profit:** Line Chart highlighting profit margins.
- **Target vs Achievement:** Bar progress metrics per Sales Rep.

03. Sales Rep Target Achievement Snapshot
